

ATUS 2024 — Variable Codebook

American Time Use Survey, 2024

LSE Research Assistant Application · Part 2: Data Task

Purnima Porwal | June 2026

Note on variable documentation. Variable labels were extracted from the ATUS 2024 Stata .do files (atusresp_2024.do, atusact_2024.do, etc.) and verified against the official BLS data dictionary (atus_int_codebk24.pdf). Reading Stata .do files in R is the equivalent of Stata’s variable labelling system: every variable name, what it measures, and what its values mean is documented there. I used Claude (Anthropic) to assist with extracting and organising the variable labels from these source files.

Five ATUS files used in this analysis:

- atusresp_2024.dat — Respondent file (175 variables, 7,669 obs.)
- atusrost_2024.dat — Roster file (8 variables)
- atusact_2024.dat — Activity file (30 variables)
- atuswho_2024.dat — Who file (5 variables)
- atussum_2024.dat — Activity Summary file (396 variables, 7,669 obs.)

Primary merge key: TUCASEID (14-digit case ID, present in all five files).

Activity-level merge key: TUACTIONITY_N (links act ↔ who).

Person-level merge key: TULINENO (links who ↔ rost).

Roster File (atusrost_2024.dat) — 8 Variables

One row per household member per respondent. Used to identify the age of each person present during activities (linked via TUCASEID + TULINENO to the Who file). Key for the M2 child-present measure: check whether any roster person with TEAGE < 18 appears in the Who file for a given activity.

Variable	Description	Values

TULINENO	Person line number	Links to Who file
TEAGE	Age (edited)	In years

Activity File (atusact_2024.dat) — 30 Variables

One row per activity episode per respondent (episode-level file). Key for constructing M1 (primary direct care minutes) and M2 (child-present minutes). **Always use TUACTIONDUR24** (not TUACTIONDUR): it truncates the last activity of the diary day at 4:00 a.m., which is the standard BLS convention for a diary day running 4:00 a.m. to 3:59 a.m.

Identifiers

Variable	Description
TUCASEID	ATUS Case ID (14-digit identifier) — merge key
TUACTIVITY_N	Activity line number — merge key (links to Who file)

Activity Classification

Tier codes are read into R as integers by `read_csv() — as.numeric()` in Part 4 confirms this. The Stata `.do` files use character strings with leading zeros; R does not. All numeric comparisons in the script use bare integers (e.g. `== 3, %in% 7:10`) which is correct for this environment.

Variable	Description
TUTIER1CODE	Tier 1 code: 1st and 2nd digits of 6-digit activity code (e.g., 01=Personal care, 05=Work, 03=Caring for HH members)
TUTIER2CODE	Tier 2 code: 3rd and 4th digits of 6-digit activity code
TUTIER3CODE	Tier 3 code: 5th and 6th digits of 6-digit activity code
TRCODE	Full six-digit activity code (combination of all three tiers)
TRTIER2	First and second activity tiers combined

Activity Duration and Timing

Variable	Description
TUACTIONDUR	Duration of activity in minutes — last activity <i>not</i> truncated at 4:00 a.m.
TUACTIONDUR24	Duration of activity in minutes — last activity truncated at 4:00 a.m. Use this variable for all analysis.
TUCUMDUR	Cumulative duration of all activities, last activity not truncated
TUCUMDUR24	Cumulative duration of all activities, last activity truncated at 4:00 a.m.
TUSTARTTIM	Activity start time
TUSTOPTIME	Activity stop time
TUDURSTOP	How duration was reported (1=Duration entered directly, 2=Stop time was entered)

Location

Variable	Description
TEWHERE	Where was the respondent during this activity? (1=Home, 2=Workplace, 3=Someone else's home, 4=Restaurant/bar, 5=Place of worship, 6=Grocery store, 7=Other store/mall, 8=School, 9=Outdoors, 10=Library, 11=Other place, 12=Car/driver, 13=Car/passenger ...)
TXWHERE	Allocation flag for TEWHERE

TUCC7	Was at least one own non-HH child <13 in your care during this activity?

TRTO_LN	Secondary childcare minutes this activity — own children <13
TRTEC_LN	Eldercare minutes provided during this activity

Eldercare Flag

Variable	Description
TUEC24	Was eldercare provided during this activity? (1=Yes, 96=All day, 97=No more activities)

Who File (atuswho_2024.dat) — 5 Variables

One row per person present per activity episode. Used to construct the M2 child-present measure: flag whether a person under 18 was present during each activity, then collapse to respondent level. **Important:** TULINENO < 0 means the entry is an aggregate category (e.g. “all household members”) and cannot be linked to a specific row in the Roster file — the resulting child-present measure is therefore a *lower bound*.

Variable	Description	Values
TUCASEID	ATUS Case ID	14-digit string. Merge key
TUACTIVITY_N	Activity line number	Links back to Activity file
TULINENO	Person line number	Links to Roster file. Negative values = aggregate category; cannot be linked to a specific person.
TRWHONA	Who information not asked for this activity	0 = TUWHO_CODE was asked; 1 = TUWHO_CODE was not asked
TUWHO_CODE	Who was present?	18/19=Alone; 20=Spouse; 21=Unmarried partner; 22=Own HH child; 23=Grandchild; 24=Parent; 25=Brother/sister; 26=Other relative; 27=Foster child; 28=Housemate; 29=Roomer/boarder; 30=Other nonrelative; 40=Own non-HH child <18; 51=Non-HH parents; 52=Other non-HH family <18; 53=Other non-HH family 18+; 54=Friends; 56=Neighbours/acquaintances; 57=Other non-HH children <18; 58=Other non-HH adults; 59=Boss/manager; 60=People I supervise; 61=Co-workers; 62=Customers

Activity Summary File (atussum_2024.dat) — 396 Variables

396 variables, 7,669 observations. One row per respondent. Columns 1–24 are demographic header variables (a subset of the Respondent file). Columns 25–396 are **activity time-use variables**: each gives the total minutes the respondent spent on that specific activity on the diary day. A value of 0 means the respondent did not do that activity — it is a true zero, not missing. Merge key: TUCASEID.
